

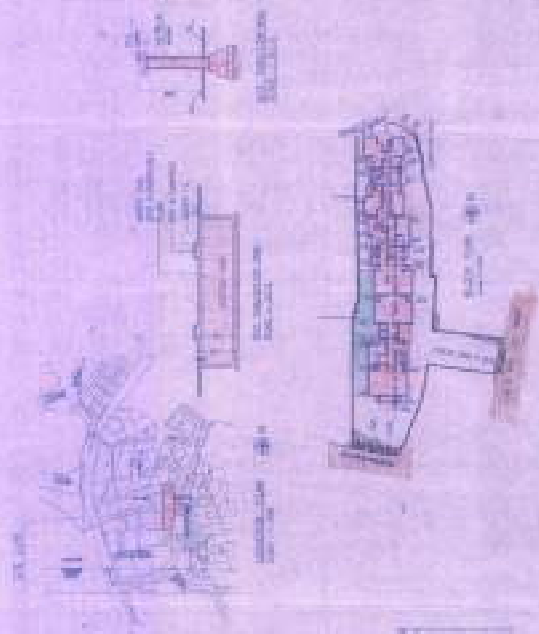

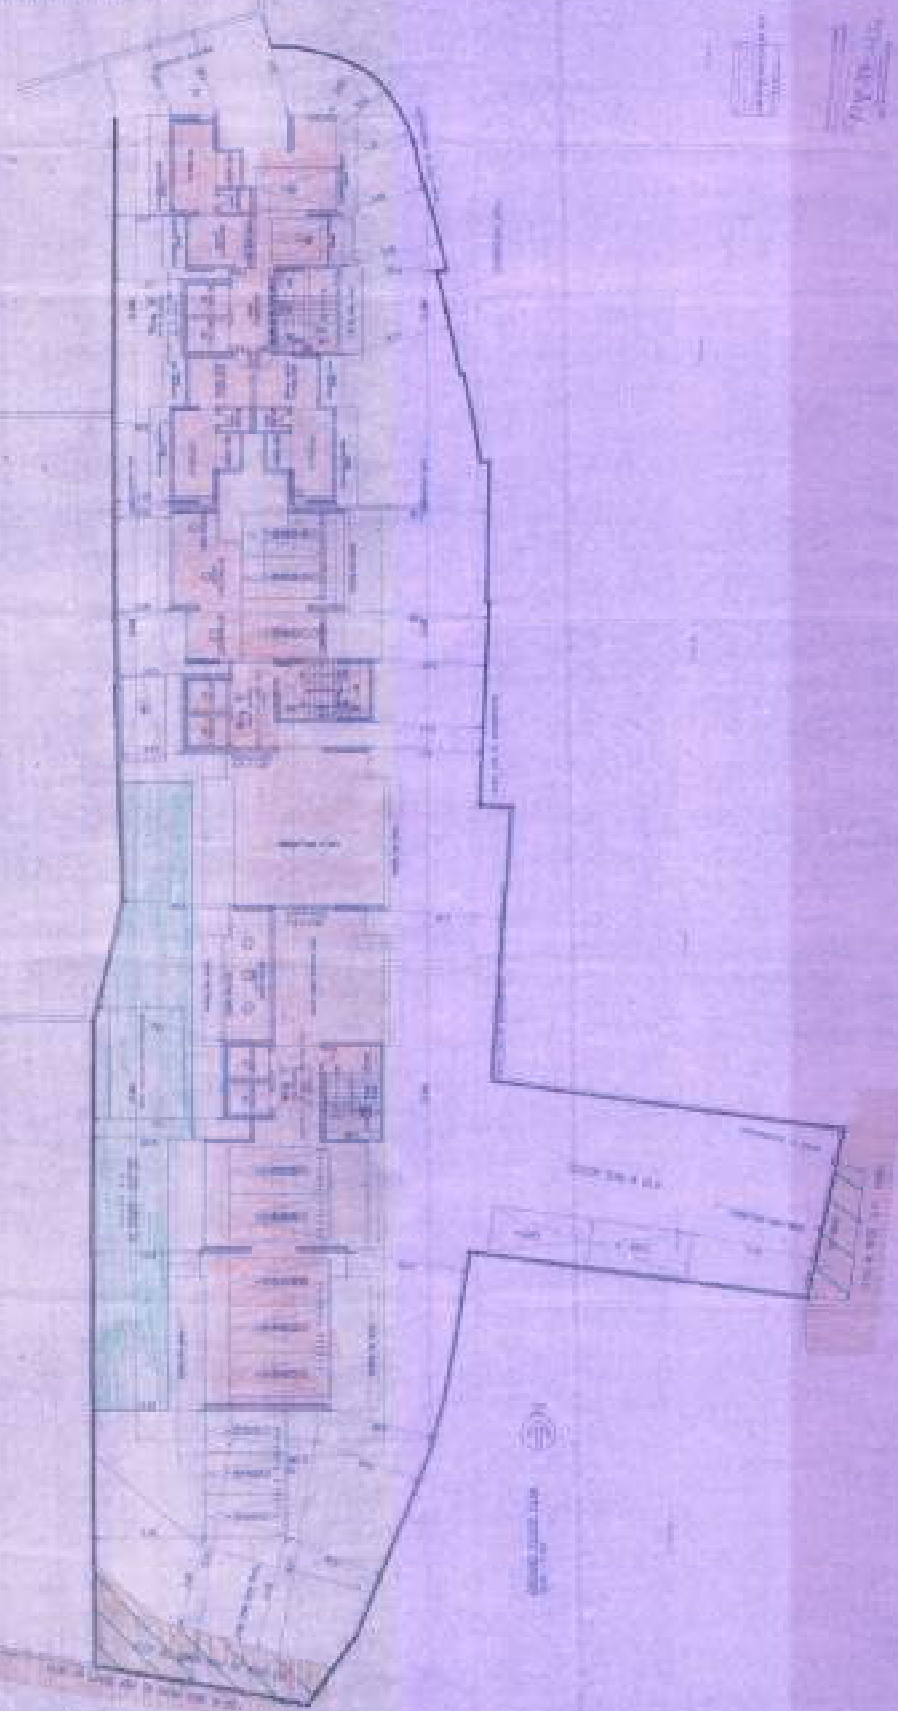

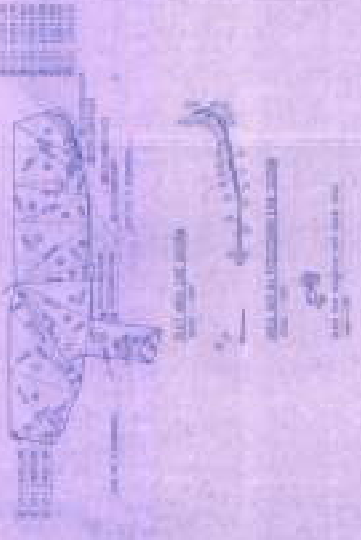

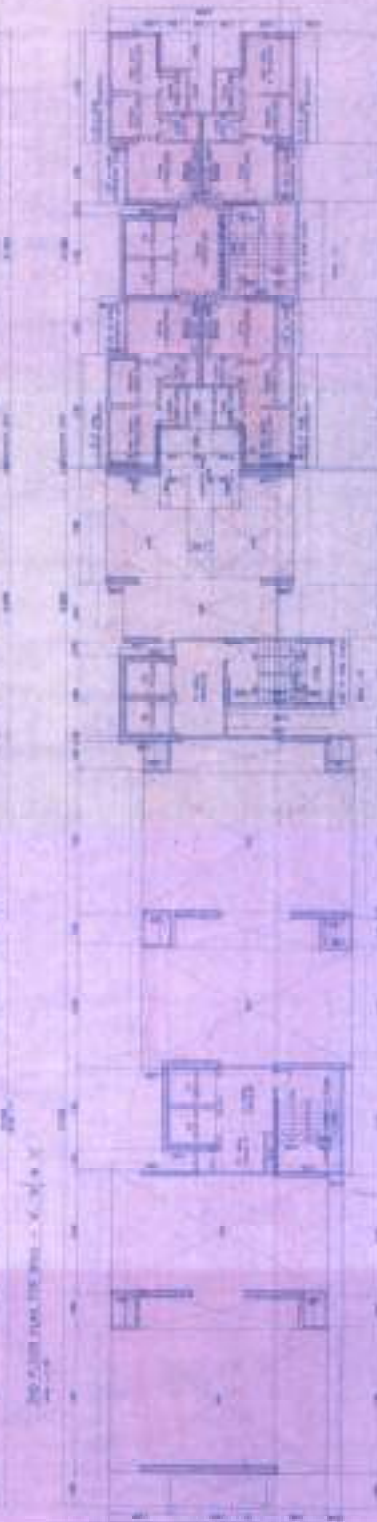

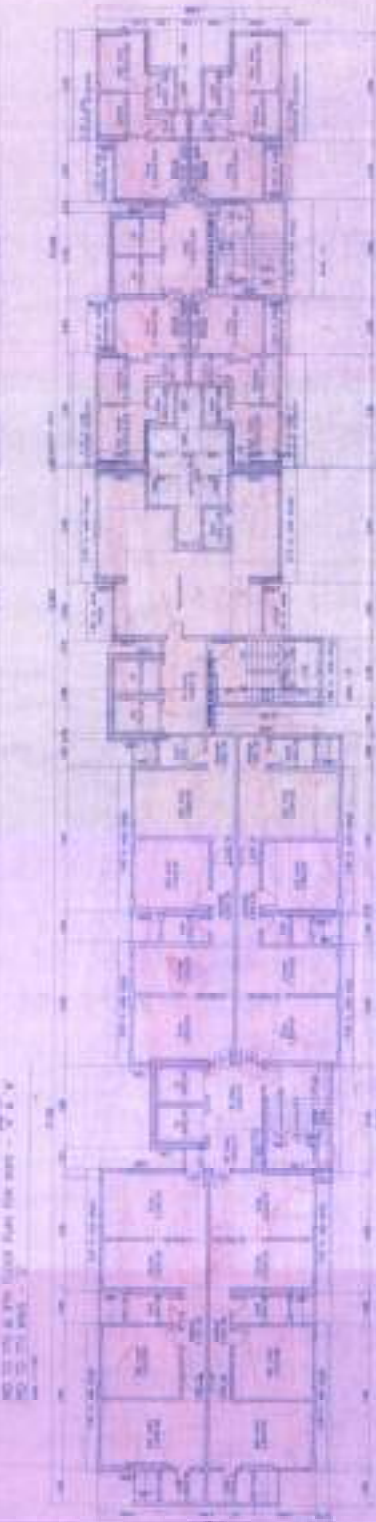

Figure 1 is a 3D bar chart illustrating the distribution of the number of children per family (Y-axis, 0 to 10) across different levels of education (X-axis, 1 to 10) and income (Z-axis, 1 to 10). The chart shows that the number of children per family generally increases with both education and income levels. The highest frequency of children per family is observed for families with high education and high income, reaching up to 10 children.

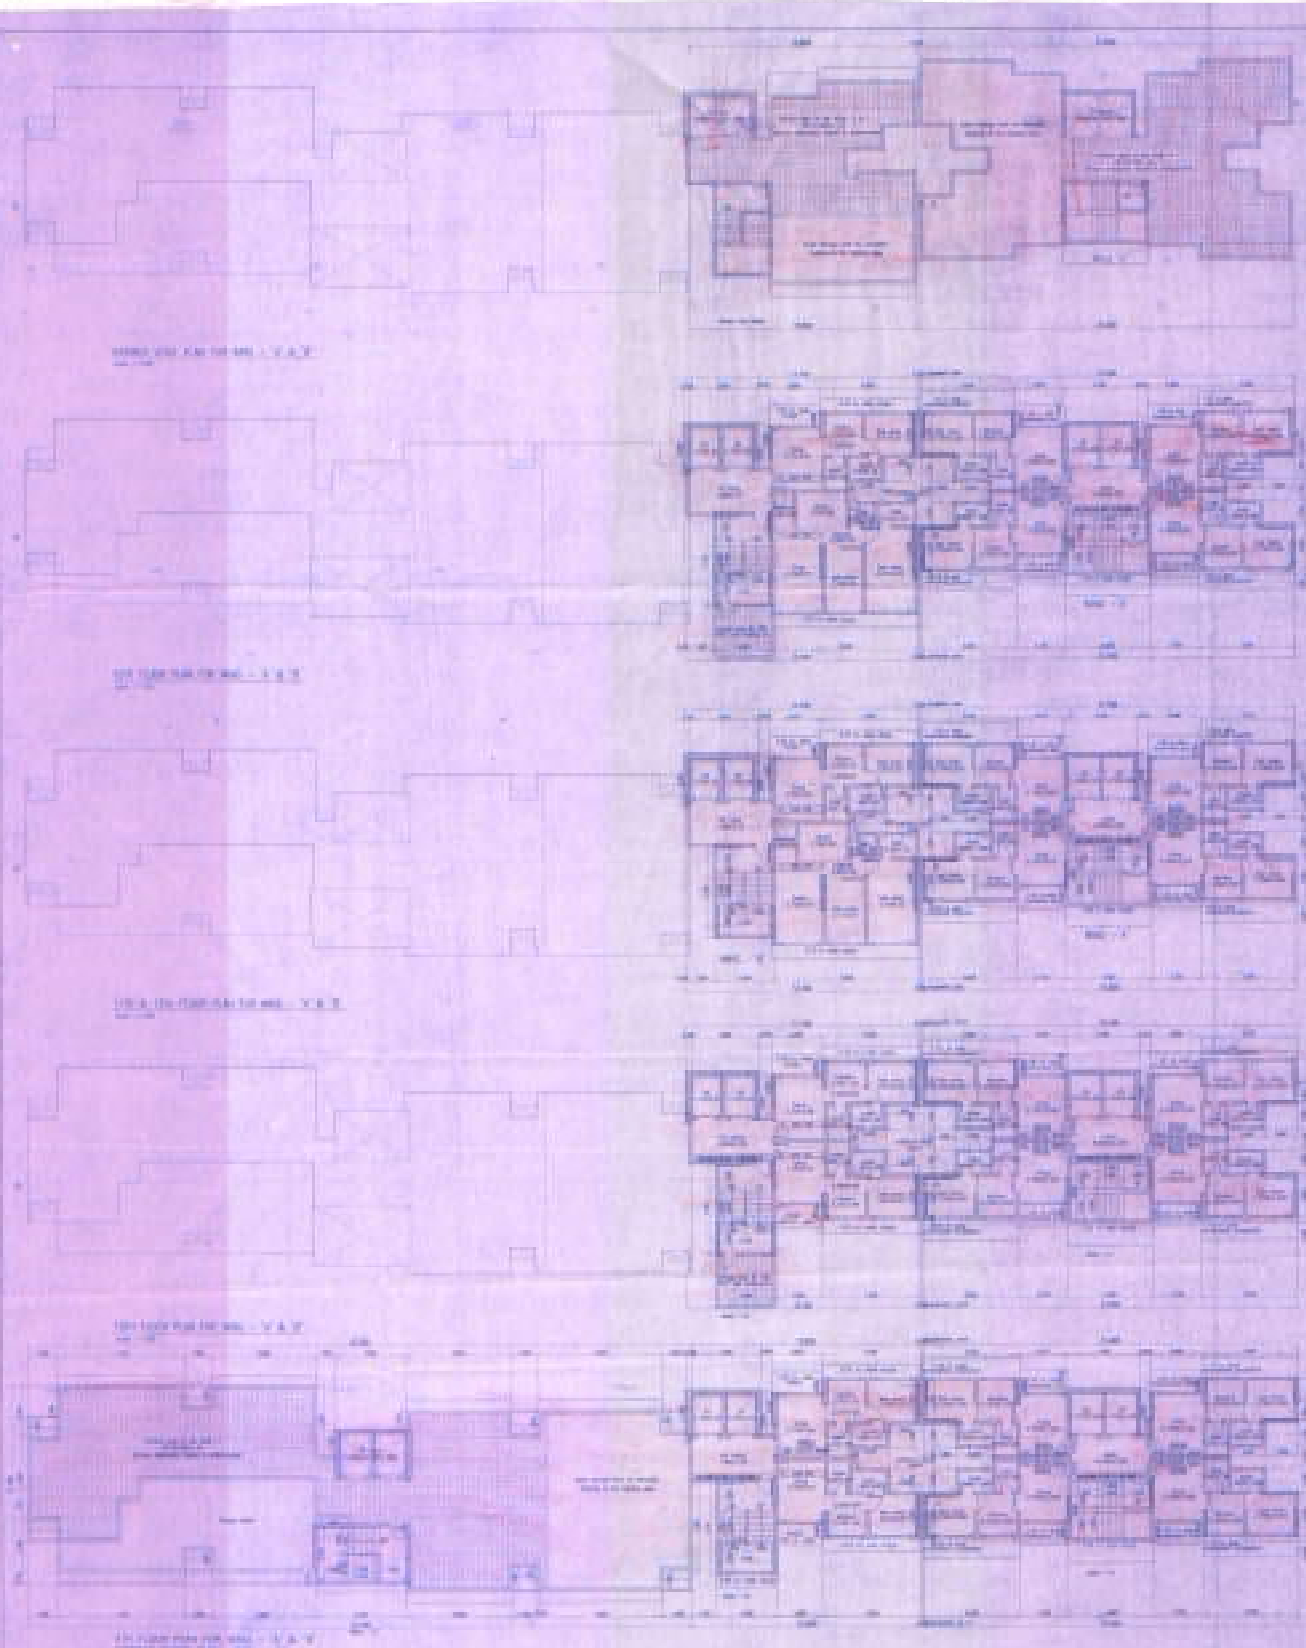

The image shows a document with a grid structure, likely a ledger or a form. The grid is composed of multiple rows and columns. The text and numbers within the grid are heavily blurred and difficult to read. The document appears to be a scan of a physical document, with a high level of contrast and some noise. The overall appearance is that of a low-quality scan of a physical document.
